Vinçotte Environment

The condition of our environment is becoming ever more important in our society, both on a personal and industrial level. This evolution results from a constantly changing environmental legislation. Vinçotte Environment assists companies to reach their specific objectives in this matter.

With 70 employees – engineers, environmental & safety specialists, geologists, biologists, etc. – Vinçotte Environment developed a wide range of services focused on environment and safety in the broadest sense of the word. With activities such as environmental studies, consultancy and advice, measurements and analyses of air, soil, asbestos, noise, water and energy, Vinçotte Environment holds an important position on both a national and an international level of safety and environment.

Vinçotte Environment constantly improves its services and makes thorough inquiries of the latest adaptations to the relevant laws and technologies. This enables us

to offer our clients a complete service range of environmental, safety and energy studies and to support these projects, from the very beginning until the end. All-in services, combined with the support of other experts within the overarching company Vinçotte, distinguish us from the competition.

The Vinçotte Environment laboratories and services are VCA** certified and BELAC accredited (certificate nr.089) for air (emissions), noise, asbestos (air and materials) and soil (sampling).

- Vinçotte Environment is a part of Vinçotte, a leader in quality, safety and environmental services.
- Vinçotte Environment is an acknowledged soil remediation expert and EIA-expert in the Flemish, Brussels and Walloon Region.
- Vinçotte Environment is internationally active.

Air

- Regulatory emission measurements
- Validation of automated measuring systems
- Gas analysis: biogas, process gas...
- Assessments

Water

- Analysis of industrial and waste water

Energy

- Performance tests: heat balance, efficiency, power...
- Energy audits on buildings or industrial units
- Continuous measurements of flows: steam, water, gas, air...
- Tests on exchangers, cooling towers, boilers, cogenerations...

Health

- Assessments of exposure to chemical and physical agents in the workplace
- Assessment of comfort and health conditions in offices: sick building syndrome

Asbestos

- Asbestos survey and risk assessment
- Air measurements and identification in bulk samples
- Project Management
- Building certification: "Asbestos-Safe" and "Asbestos-Free"

Noise

- Measurements, assessments, noise reduction, investigation & advisory services in the fields of:
- Environment
 - Workplace
 - Machinery
 - Buildings

Risk & Environment

- Safety assessments and risk analysis: "Seveso" safety reports – safety management systems – PLANOP – HAZOP
- ATEX: HAZOP – SIL
- Environmental impact assessments – Environmental surveys: waste, water, air,...
- Environmental audits
- Advice – Assistance – Environmental coordination
- Energy surveys
- Waste
- Hazardous substances: REACH – ADR – storage
- Best Available Techniques: surveys and assessments: air, water,...

Soil

- Assessments of soil and groundwater pollution: soil investigation
- Determination of risks and necessity of soil remediation: risk assessment
- Determination of remediation plans and follow-up: soil remediation project
