

## REACH (Registration, Evaluation, Authorisation and restriction of Chemicals)

The European REACH Regulation has become applicable since 1st June. It is intended to improve knowledge about the chemicals circulating in the European Union. This new regulation requires manufacturers/importers of chemical substances, preparations or items containing chemicals, to gather and disseminate information about the characteristics of their products. Henceforth, it will no longer be possible to introduce any substance into the market without first registering it with the ECHA (European Chemicals Agency). Vincotte would be happy to help you fulfil the requirements of the REACH Regulation.

### Your tailor-made solution

Vincotte Environment will make a team of experts available to you, with extensive and continuing training, which will ensure that you receive optimum service.

In this manner, we can assess the impact of REACH on your undertaking, and explain the various stages of the registration process to you. To this end, we offer you services tailor-made to your requirements:

- inventory of your chemical products portfolio
- identification of the substances
- calculation of the tonnages
- assessment of your role in the supply chain
- assessment of your obligations under REACH
- preliminary registration of the substances
- gap analysis

### Your result

We therefore ensure that by the end of our collaboration, your company will fully conform to the REACH Regulation.

### Please note

### Legislations

European Regulation (EC) 1907/2006 concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH).

### In which situation?

We would be happy to offer our services to each and every company that manufactures, purchases or imports chemicals/preparates or articles that contain chemicals.

Vincotte has the appropriate solution for your situation as well. Contact us for tailor-made advice.
