

Inspection of gas installations

Do you wish to be sure about whether there are any leaks in your installation and do you want to reduce the possibility of CO poisoning? Our experts will inform you concerning the conformity of your gas installation in accordance with the latest statutory regulations and standards.

Your tailor-made solution

Our experts will check the conformity of:

- connecting parts
- materials
- methods of installing equipments and piping
- ventilation
- chimney flues
- chimney flue openings
- appliances
- valves
- ...

Further, we carry out a leak tightness test of your entire installation and draw up a certificate for the opening of the meter, for your insurer, or for your prevention consultant.

Your result

Thanks to our inspection, you can be assured that leakages will be detected, that the chance of CO poisoning remains limited, and that the gas installation conforms to the latest applicable laws and standards.

Furthermore, this certificate is required to:

- commence the filling of the LPG container
- have the meter opened
- allow football stadiums to operate
- enable the operation of nursing homes and care institutions
- enable hospitals to operate
- fulfil the requirements of Article 23 §2 of the Royal Decree dated 28.03.2014, relating to fire prevention at workplaces
- enable the operation of an accommodation establishment
- be allowed to enter with mobile installations at fairs, exhibition halls, markets, etc.
