

Execution of general construction tests and analyses

If you discover your building is showing signs of damage, you want to have an idea of the condition of a certain structure or you would like an expert to investigate your structural problem further, you can call upon the services of Vinçotte, as an ideal partner. A team of structural engineers and architects is ready to help you with any such issues.

Your tailor-made solution

Our experts will carry out various tests and analyses focused on damp problems, resistance of materials and quality and performance checks.

Some of the issues we deal with:

Damp problems

- using a Karsten Tube to perform absorption tests on facades
- using a carbide bottle to measure moisture
- electronic moisture measurements
- etc.

Resistance of materials

- using a scribe to check surface hardness of covering floors
- etc.

Checking performance quality

- floor flatness measurements
- installing metres to monitor cracks
- etc.

Your result

A report featuring the measurement results will be drawn up while the accompanying analyses are established and delivered as a basis for deciding if the work has been carried out in keeping with the requirements, what the cause and scale of the damage is, ...

Please note

- Royal Decrees
- **General Regulations on Protection at Work** and the Code on Well-being in the Workplace
