

Technical advice about the phased implementation of work and the construction techniques to be used

If you are looking for advice or technical assistance for work you are undertaking that may make a major impact on the stability of your existing supporting structures, get in touch with our experts for recommendations about what steps to take and what techniques to use towards this end.

Your tailor-made solution

Our experts are happy to offer you advice about the approach to adopt to the phased implementation of your work and about choosing the right techniques. Typical examples of areas where such advice can be put into practice:

- major alterations
- tricky demolition operations
- shoring
- etc.

When you have developed some plans for specific operations, we can get together with you to think about how the process can be divided up into different logical stages and how the right techniques can be applied in each case, with a view to guaranteeing safety and quality at every stage of the process.

Your result

Our service enables you to carry out the planned work safely and according to high standards.
