

Efficient energy use in buildings

Designers, customers and contractors all have to contend with various regional laws (Brussels, Flanders and Wallonia) that are becoming increasingly stringent and hard to grasp. Mention should also be made of the constraints of a market with a growing concern for environmental issues.

Your tailor-made solution

Within this context, Vincotte can help you to take account of the various energy efficiency objectives in every stage of your real estate project. This applies both from a legal perspective (as reflected in the various components of the regional EPBs, for example) or from a voluntary perspective (as in the case of buildings certified as complying with the passive house concept, for example).

Your result

You can rely on the Vincotte Civil Engineering department to operate as an objective and independent advisor, providing you with the expertise you need and offering relevant information in various areas, such as:

- EPB calculations for the design of new buildings,
- EPB calculations for the purpose of selling or renting out offices or for major real estate projects,
- Energy audits for your building, whether they are performed on a voluntary basis or in response to regional requirements,
- PHPP (Passive House Planning Package) calculations for obtaining carbon-neutral certification,
- Etc...

Please note

- Royal Decrees
- General Regulations on Protection at Work and the Code on Well-being in the Workplace
- Regional and Municipal Regulations

Norms and standards

- NBN EN 1990 to 1999 (Eurocodes)

In which situation?

All professionals requiring effective support in achieving the energy performance objectives of their real estate projects.
