

Technical advice in case of construction errors

If you are having to contend with structural defect issues, and you would like to know more about the causes of the damage and how to remedy them, our experts can carry out suitable inspections in order to provide answers to your questions.

Your tailor-made solution

Our experts first of all make a visual inspection in response to the discovery that your structure is damaged. Examples of the kind of damage encountered:

- leaks
- cracks
- subsidence
- etc.

There is then also the option of testing and (long-term) measurements. Any plans made available to our experts are used to undertake an analysis of the potential problems. We investigate the causes of the irregularities and propose appropriate solutions.

Your result

As a result of this service, you will be offered a report featuring technical advice as a basis for remedying the defects so that the structure may be safely recommissioned.

Please note

- Royal Decrees
- **General Regulations on Protection at Work** and the Code on Well-being in the Workplace
- **General Regulations on Electrical Installations**
- Regional and Municipal Regulations

Norms and standards

- **Belgian and European standards**, including standards in the series NBN EN 1990 to 1999 (**Eurocodes**) and the series NBN B
